

Outburst Monitoring Scale (OMS) – Permission and Use

- Professional Qualifications of OMS Users
 - One of the following three types of qualifications is required to receive permission to use the OMS:
 - Faculty members engaged in appropriate, approved research following legal and ethical principles within their scope of expertise.
 - Clinical health care professionals holding a valid license to practice in a health-related field for which use of the OMS falls within the scope of practice.
 - Clinical educational professionals holding a valid license for which the OMS falls within the scope of practice.
 - Individuals who do not fall into one of the categories above may request special permission from the OMS author after providing an explanation and scope of use. These exceptions are expected to be rare.
 - Students may use the OMS only under the supervision of a qualified professional who has permission to use the OMS. The supervising professional must request use of the OMS and retains responsibility for following these guidelines.
- Permission to Use
 - For permission to use the OMS, please send an email to the scale author (William Kronenberger, Ph.D.) at wkronenb@iupui.edu. The email must include the following elements:
 - Name, Degree, Location (country and state/province/city)
 - For Faculty Members: Current Academic Institution and Department, Academic Rank, and Field of Expertise (e.g., Psychology, Pediatrics, Speech-Language Pathology, etc.).
 - For Licensed Health Care or Clinical Educational Professionals: Licensed Profession (e.g., Speech-Language Pathologist, Physician, Clinical Psychologist, School Psychologist, etc.), and License Number and Jurisdiction (State, Country) or Certification Number and Organization.
 - The request for permission to use the OMS must include the exact sentence: “I agree to abide by the OMS Scale Permission and Use document as posted on Dr. Kronenberger’s website.” By sending this information, you agree to abide by all conditions below.
 - After receiving permission to use from the scale author, William Kronenberger, Ph.D. (wkronenb@iupui.edu), the requesting individual may use and reproduce the OMS for clinical and research purposes, with the following limitations:
 - The user may not alter the OMS without additional permission from the scale author.
 - The user may not post or distribute the scale in an electronic format without additional special permission from the scale author. This includes not copying, administering, or posting the OMS online for any purpose (including but not limited to clinical or research purposes). If you are interested in using the OMS in an online administration format, you may send a separate request to the scale author at wkronenb@iupui.edu. Permission to use the OMS online, if granted, will be for a fixed number of participants for a specific purpose and a limited time.
 - Distribution of the OMS to any other individual or organization requires additional permission. In almost all cases, that other individual or organization will be required to directly request permission to use the OMS from the scale author.
 - Use of the OMS in a for-profit endeavor such as a clinical trial by a for-profit organization requires additional permission.
 - The user must be appropriately qualified for use of the scale (see below).

- Any additional permissions should be sought by contacting the scale author at wkronenb@iupui.edu.
- Please provide appropriate citations to OMS articles if the OMS is being used for research purposes.
- Translation of the OMS
 - Translation of the OMS into any language other than English may be performed only after receiving specific permission from the scale author to create a translation.
 - A copy of the final translated version of the OMS must be sent to the scale author at his email address. The OMS author retains permission to use or distribute the translated version.
 - Translated versions of the OMS may not be distributed to any other individual or organization without permission of the scale author.
 - The process of translation must follow the guidelines of the World Health Organization (see https://www.who.int/substance_abuse/research_tools/translation/en/) and the International Test Commission (ITC Guidelines for Translating and Adapting Tests).
 - Evaluation of the adequacy of the final translated version is the responsibility of the OMS user.
- Appropriate use of the OMS
 - Users of the OMS are expected to follow rules for test user qualifications and test use as described by organizations such as the American Psychological Association.
 - Clinical users of the OMS should follow standards for use of behavior checklists to enhance clinical work. These standards generally recommend that behavior checklists be used to augment clinical care and not to substitute for other methods of evaluation. In particular, it is generally accepted that behavior checklists should not substitute for interview and other methods of direct observation/evaluation as a part of the diagnostic process.
 - Users of the OMS should be familiar with scale research and psychometrics. Please consult our research for information about scale development and psychometrics.
- For any additional questions or information (including permission to use the OMS), please contact the scale author, William Kronenberger, Ph.D. (wkronenb@iupui.edu).
